Education

MLR Institute of Technology Bachelor of Technology in Computer Science — CGPA: 8.97	2023 – 2027
Narayana Junior College Intermediate (Class XII) — CGPA: 9.47 GPA	2023
G. Pulla Reddy High School Secondary School (Class X) — CGPA: 10.0	2021

Work Experience

Web Developer — Brain-O-Vision	Feb 2025 – May 2025
- Developed and customized a responsive Shopify eCommerce platform using Liquid templating and theme customization. - Configured payment settings and optimized product collections to ensure smooth checkout workflows and scalable store management.	

Projects

Agent-Based RFP Automation System	Python, LLMs, LangGraph, FastAPI, React
- A system that automates the process of responding to enterprise Requests for Proposals (RFPs) by coordinating multiple AI agents for sales discovery, technical matching, and pricing estimation. - Built a multi-agent workflow where Sales, Technical, and Pricing agents handle different stages of the RFP response process. - Used vector search with Zilliz to match RFP product requirements with the closest internal product SKUs. - Used LangGraph to manage the workflow between agents and generate a final proposal with technical and pricing details.	
ChatGram — Real-Time Chat Application	Node.js, Express.js, MongoDB, Socket.IO, React
- A full-stack real-time chat application that supports one-on-one and group messaging with authentication and live updates. - Implemented real-time messaging using Socket.IO with secure JWT authentication and stored chat history and users in MongoDB.	
Deepfake Detection System	Python, PyTorch, Flask
- A web application that detects whether a video is real or deepfake using a deep learning model. - Trained a CNN model using FaceForensics++, Celeb-DFdatasets to classify videos as real or fake. - Built a Flask web interface where users can upload videos and receive a verification certificate after analysis.	
Spotify Clone	HTML, CSS, JavaScript
- A frontend recreation of Spotify's music player interface. - Designed a responsive music player UI with playlist display and playback controls using HTML, CSS, and JavaScript.	

Technical Skills

Languages:	C, C++, Python, Java
Backend & Systems:	Node.js, Express.js, Flask, RESTful APIs, JWT Authentication, Socket.IO
Frontend:	React, JavaScript, HTML, CSS, Tailwind CSS
AI / ML:	PyTorch, LangChain, LangGraph, RAG, Vector Databases
Databases:	MongoDB, SQL, Firebase
Tools & Cloud:	Git, GitHub, Docker, AWS, GCP, Vercel, Netlify
CS Fundamentals:	Data Structures & Algorithms, OOP

Certifications & Achievements

- First Prize — Zignasa 2K24 (24-Hour National Hackathon)**
Developed a Deepfake Detection System using **Python, PyTorch, and Flask**. Implemented deep learning models for video classification and deployed a web-based solution, demonstrating expertise in AI/ML, computer vision, and real-time inference under strict time constraints.
- Supervised Machine Learning — Coursera
