Education

MLR Institute of Technology	2023–2027
Bachelor of Technology in Computer Science — CGPA: 8.80	
Narayana Junior College	2023
Intermediate (Class XII) — CGPA: 9.47 GPA	
G. Pulla Reddy High School	2021
Secondary School (Class X) — CGPA: 10.0	

Work Experience

Web Developer — Brain-O-Vision	Feb 2025 – May 2025
- Developed responsive Shopify eCommerce solutions using Liquid templating, improving usability and maintainability. - Customized themes, integrated payment workflows, and optimized product collections for scalable online store management.	

Projects

Agent-Based RFP Automation System	Python, FastAPI, LangGraph, React, Zilliz, LLMs
- Built an AI-powered enterprise RFP automation platform using LangGraph to orchestrate multiple specialized agents for sales discovery, technical recommendation, and pricing estimation. - Developed scalable FastAPI backend services for document processing, workflow orchestration, and API integration between AI agents. - Integrated Zilliz vector search for semantic retrieval of product information, enabling accurate technical matching between customer requirements and internal product SKUs. - Designed modular agent workflows that generated complete proposal documents by coordinating retrieval, reasoning, and pricing across multiple AI agents.	
ChatGram – Real-Time Chat Application	Node.js, Express.js, MongoDB, Socket.IO, React
- Built a MERN-based real-time messaging platform supporting one-to-one and group conversations with JWT-based authentication and Socket.IO. - Implemented secure real-time messaging using authenticated WebSocket connections, role-based group administration, and protected message ownership. - Improved backend scalability and reliability through cursor-based pagination, centralized middleware, and automated testing for authentication, authorization, and real-time messaging workflows.	
Deepfake Detection System	Python, PyTorch, Flask
- Built a deep learning application for detecting manipulated videos using CNN-based models trained on FaceForensics++ and Celeb-DF datasets. - Developed a Flask web application allowing users to upload videos and receive automated authenticity verification. - Applied computer vision and deep learning techniques to perform binary video classification with real-time inference.	

Technical Skills

Languages:	Python, Java, C++, C
Backend:	FastAPI, Flask, Node.js, Express.js, REST APIs
Frontend:	React, JavaScript, HTML, CSS, Tailwind CSS
Databases:	MongoDB, SQL, Firebase
Cloud & DevOps:	AWS, Docker, Git, GitHub, Postman, Vercel, Netlify
AI/ML:	LangGraph, LLMs, Vector Search, Prompt Engineering, PyTorch
CS Fundamentals:	Data Structures, Algorithms, OOP

Certifications & Achievements

Winner — Zignasa 2K24 (24-Hour National Hackathon) Developed a Deepfake Detection System using Python, PyTorch, and Flask, demonstrating expertise in AI/ML, computer vision, and real-time inference. - Solved 300+ algorithmic coding problems across LeetCode and CodeChef with emphasis on data structures, graph algorithms, and dynamic programming. - Supervised Machine Learning: Regression and Classification — Coursera.
